

---

# Submission and Formatting Instructions for International Conference on Machine Learning (ICML 2016)

---

## Abstract

The purpose of this document is to provide both the basic paper template and submission guidelines. Abstracts should be a single paragraph, between 4–6 sentences long, ideally. Gross violations will trigger corrections at the camera-ready phase.

## 1. Electronic Submission

Submission to ICML 2016 will be entirely electronic, via a web site (not email). Information about the submission process and L<sup>A</sup>T<sub>E</sub>X templates are available on the conference web site at:

<http://icml.cc/2016/>

Send questions about submission and electronic templates to [icml2016pc@gmail.com](mailto:icml2016pc@gmail.com).

The guidelines below will be enforced for initial submissions and camera-ready copies. Here is a brief summary:

- Submissions must be in PDF.
- The maximum paper length is **8 pages excluding references and acknowledgements, and 10 pages including references and acknowledgements** (pages 9 and 10 must contain only references and acknowledgements).
- Do **not include author information or acknowledgements** in your initial submission.
- Your paper should be in **10 point Times font**.
- Make sure your PDF file only uses Type-1 fonts.
- Place figure captions *under* the figure (and omit titles from inside the graphic file itself). Place table captions *over* the table.

---

Preliminary work. Under review by the International Conference on Machine Learning (ICML). Do not distribute.

- References must include page numbers whenever possible and be as complete as possible. Place multiple citations in chronological order.
- Do not alter the style template; in particular, do not compress the paper format by reducing the vertical spaces.
- Keep your abstract brief and self-contained, one paragraph and roughly 4–6 sentences. Gross violations will require correction at the camera-ready phase. Title should have content words capitalized.

### 1.1. Submitting Papers

**Paper Deadline:** The deadline for paper submission to ICML 2016 is at **23:59 Universal Time (3:59 p.m. Pacific Standard Time) on February 5, 2016**. If your full submission does not reach us by this time, it will not be considered for publication. There is no separate abstract submission.

**Anonymous Submission:** To facilitate blind review, no identifying author information should appear on the title page or in the paper itself. Section 2.3 will explain the details of how to format this.

**Simultaneous Submission:** ICML will not accept any paper which, at the time of submission, is under review for another conference or has already been published. This policy also applies to papers that overlap substantially in technical content with conference papers under review or previously published. ICML submissions must not be submitted to other conferences during ICML’s review period. Authors may submit to ICML substantially different versions of journal papers that are currently under review by the journal, but not yet accepted at the time of submission. Informal publications, such as technical reports or papers in workshop proceedings which do not appear in print, do not fall under these restrictions.

To ensure our ability to print submissions, authors must provide their manuscripts in **PDF** format. Furthermore, please make sure that files contain only Type-1 fonts (e.g., using the program `pdffonts` in linux or using File/DocumentProperties/Fonts in Acrobat). Other fonts

(like Type-3) might come from graphics files imported into the document.

Authors using **Word** must convert their document to PDF. Most of the latest versions of Word have the facility to do this automatically. Submissions will not be accepted in Word format or any format other than PDF. Really. We're not joking. Don't send Word.

Those who use **L<sup>A</sup>T<sub>E</sub>X** to format their accepted papers need to pay close attention to the typefaces used. Specifically, when producing the PDF by first converting the dvi output of **L<sup>A</sup>T<sub>E</sub>X** to Postscript the default behavior is to use non-scalable Type-3 PostScript bitmap fonts to represent the standard **L<sup>A</sup>T<sub>E</sub>X** fonts. The resulting document is difficult to read in electronic form; the type appears fuzzy. To avoid this problem, dvips must be instructed to use an alternative font map. This can be achieved with the following two commands:

```
dvips -Ppdf -tletter -G0 -o paper.ps paper.dvi
ps2pdf paper.ps
```

Note that it is a zero following the “-G”. This tells dvips to use the config.pdf file (and this file refers to a better font mapping).

A better alternative is to use the **pdflatex** program instead of straight **L<sup>A</sup>T<sub>E</sub>X**. This program avoids the Type-3 font problem, however you must ensure that all of the fonts are embedded (use `pdffonts`). If they are not, you need to configure **pdflatex** to use a font map file that specifies that the fonts be embedded. Also you should ensure that images are not downsampled or otherwise compressed in a lossy way.

Note that the 2016 style files use the `hyperref` package to make clickable links in documents. If this causes problems for you, add `nohyperref` as one of the options to the `icml2016` `usepackage` statement.

## 1.2. Reacting to Reviews

We will continue the ICML tradition in which the authors are given the option of providing a short reaction to the initial reviews. These reactions will be taken into account in the discussion among the reviewers and area chairs.

## 1.3. Submitting Final Camera-Ready Copy

The final versions of papers accepted for publication should follow the same format and naming convention as initial submissions, except of course that the normal author information (names and affiliations) should be given. See Section 2.3.2 for details of how to format this.

The footnote, “Preliminary work. Under review by the International Conference on Machine Learning (ICML). Do

not distribute.” must be modified to “*Proceedings of the 33<sup>rd</sup> International Conference on Machine Learning*, New York, NY, USA, 2016. JMLR: W&CP volume 48. Copyright 2016 by the author(s).”

For those using the **L<sup>A</sup>T<sub>E</sub>X** style file, simply change `\usepackage{icml2016}` to

```
\usepackage[accepted]{icml2016}
```

Authors using **Word** must edit the footnote on the first page of the document themselves.

Camera-ready copies should have the title of the paper as running head on each page except the first one. The running title consists of a single line centered above a horizontal rule which is 1 point thick. The running head should be centered, bold and in 9 point type. The rule should be 10 points above the main text. For those using the **L<sup>A</sup>T<sub>E</sub>X** style file, the original title is automatically set as running head using the `fancyhdr` package which is included in the ICML 2016 style file package. In case that the original title exceeds the size restrictions, a shorter form can be supplied by using

```
\icmltitlerunning{...}
```

just before `\begin{document}`. Authors using **Word** must edit the header of the document themselves.

## 2. Format of the Paper

All submissions must follow the same format to ensure the printer can reproduce them without problems and to let readers more easily find the information that they desire.

### 2.1. Length and Dimensions

Papers must not exceed eight (8) pages, including all figures, tables, and appendices, but excluding references and acknowledgements. When references and acknowledgements are included, the paper must not exceed ten (10) pages. Acknowledgements should be limited to grants and people who contributed to the paper. Any submission that exceeds this page limit or that diverges significantly from the format specified herein will be rejected without review.

The text of the paper should be formatted in two columns, with an overall width of 6.75 inches, height of 9.0 inches, and 0.25 inches between the columns. The left margin should be 0.75 inches and the top margin 1.0 inch (2.54 cm). The right and bottom margins will depend on whether you print on US letter or A4 paper, but all final versions must be produced for US letter size.

The paper body should be set in 10 point type with a vertical spacing of 11 points. Please use Times typeface

throughout the text.

## 2.2. Title

The paper title should be set in 14 point bold type and centered between two horizontal rules that are 1 point thick, with 1.0 inch between the top rule and the top edge of the page. Capitalize the first letter of content words and put the rest of the title in lower case.

## 2.3. Author Information for Submission

To facilitate blind review, author information must not appear. If you are using  $\text{\LaTeX}$  and the `icml2016.sty` file, you may use `\icmlauthor{...}` to specify authors. The author information will simply not be printed until `accepted` is an argument to the style file. Submissions that include the author information will not be reviewed.

### 2.3.1. SELF-CITATIONS

If you are citing published papers for which you are an author, refer to yourself in the third person. In particular, do not use phrases that reveal your identity (e.g., “in previous work (?), we have shown ...”).

Do not anonymize citations in the reference section by removing or blacking out author names. The only exception are manuscripts that are not yet published (e.g. under submission). If you choose to refer to such unpublished manuscripts (?), anonymized copies have to be submitted as Supplementary Material via CMT. However, keep in mind that an ICML paper should be self contained and should contain sufficient detail for the reviewers to evaluate the work. In particular, reviewers are not required to look at the Supplementary Material when writing their review.

### 2.3.2. CAMERA-READY AUTHOR INFORMATION

If a paper is accepted, a final camera-ready copy must be prepared. For camera-ready papers, author information should start 0.3 inches below the bottom rule surrounding the title. The authors’ names should appear in 10 point bold type, electronic mail addresses in 10 point small capitals, and physical addresses in ordinary 10 point type. Each author’s name should be flush left, whereas the email address should be flush right on the same line. The author’s physical address should appear flush left on the ensuing line, on a single line if possible. If successive authors have the same affiliation, then give their physical address only once.

A sample file (in PDF) with author names is included in the ICML2016 style file package.

## 2.4. Abstract

The paper abstract should begin in the left column, 0.4 inches below the final address. The heading ‘Abstract’ should be centered, bold, and in 11 point type. The abstract body should use 10 point type, with a vertical spacing of 11 points, and should be indented 0.25 inches more than normal on left-hand and right-hand margins. Insert 0.4 inches of blank space after the body. Keep your abstract brief and self-contained, limiting it to one paragraph and roughly 4–6 sentences. Gross violations will require correction at the camera-ready phase.

## 2.5. Partitioning the Text

You should organize your paper into sections and paragraphs to help readers place a structure on the material and understand its contributions.

### 2.5.1. SECTIONS AND SUBSECTIONS

Section headings should be numbered, flush left, and set in 11 pt bold type with the content words capitalized. Leave 0.25 inches of space before the heading and 0.15 inches after the heading.

Similarly, subsection headings should be numbered, flush left, and set in 10 pt bold type with the content words capitalized. Leave 0.2 inches of space before the heading and 0.13 inches afterward.

Finally, subsection headings should be numbered, flush left, and set in 10 pt small caps with the content words capitalized. Leave 0.18 inches of space before the heading and 0.1 inches after the heading.

Please use no more than three levels of headings.

### 2.5.2. PARAGRAPHS AND FOOTNOTES

Within each section or subsection, you should further partition the paper into paragraphs. Do not indent the first line of a given paragraph, but insert a blank line between succeeding ones.

You can use footnotes<sup>1</sup> to provide readers with additional information about a topic without interrupting the flow of the paper. Indicate footnotes with a number in the text where the point is most relevant. Place the footnote in 9 point type at the bottom of the column in which it appears. Precede the first footnote in a column with a horizontal rule of 0.8 inches.<sup>2</sup>

<sup>1</sup>For the sake of readability, footnotes should be complete sentences.

<sup>2</sup>Multiple footnotes can appear in each column, in the same order as they appear in the text, but spread them across columns and pages if possible.

Figure 1. Historical locations and number of accepted papers for International Machine Learning Conferences (ICML 1993 – ICML 2008) and International Workshops on Machine Learning (ML 1988 – ML 1992). At the time this figure was produced, the number of accepted papers for ICML 2008 was unknown and instead estimated.

## 2.6. Figures

You may want to include figures in the paper to help readers visualize your approach and your results. Such artwork should be centered, legible, and separated from the text. Lines should be dark and at least 0.5 points thick for purposes of reproduction, and text should not appear on a gray background.

Label all distinct components of each figure. If the figure takes the form of a graph, then give a name for each axis and include a legend that briefly describes each curve. Do not include a title inside the figure; instead, the caption should serve this function.

Number figures sequentially, placing the figure number and caption *after* the graphics, with at least 0.1 inches of space before the caption and 0.1 inches after it, as in Figure 1. The figure caption should be set in 9 point type and centered unless it runs two or more lines, in which case it should be flush left. You may float figures to the top or bottom of a column, and you may set wide figures across both columns (use the environment `figure*` in  $\LaTeX$ ), but always place two-column figures at the top or bottom of the page.

## 2.7. Algorithms

If you are using  $\LaTeX$ , please use the “algorithm” and “algorithmic” environments to format pseudocode. These re-

## Algorithm 1 Bubble Sort

---

**Input:** data  $x_i$ , size  $m$

**repeat**

Initialize  $noChange = true$ .

**for**  $i = 1$  **to**  $m - 1$  **do**

**if**  $x_i > x_{i+1}$  **then**

Swap  $x_i$  and  $x_{i+1}$

$noChange = false$

**end if**

**end for**

**until**  $noChange$  is *true*

---

Table 1. Classification accuracies for naive Bayes and flexible Bayes on various data sets.

DATA SET	NAIVE	FLEXIBLE	BETTER?
BREAST	95.9± 0.2	96.7± 0.2	✓
CLEVELAND	83.3± 0.6	80.0± 0.6	×
GLASS2	61.9± 1.4	83.8± 0.7	✓
CREDIT	74.8± 0.5	78.3± 0.6	
HORSE	73.3± 0.9	69.7± 1.0	×
META	67.1± 0.6	76.5± 0.5	✓
PIMA	75.1± 0.6	73.9± 0.5	
VEHICLE	44.9± 0.6	61.5± 0.4	✓

quire the corresponding stylefiles, `algorithm.sty` and `algorithmic.sty`, which are supplied with this package. Algorithm 1 shows an example.

## 2.8. Tables

You may also want to include tables that summarize material. Like figures, these should be centered, legible, and numbered consecutively. However, place the title *above* the table with at least 0.1 inches of space before the title and the same after it, as in Table 1. The table title should be set in 9 point type and centered unless it runs two or more lines, in which case it should be flush left.

Tables contain textual material that can be typeset, as contrasted with figures, which contain graphical material that must be drawn. Specify the contents of each row and column in the table’s topmost row. Again, you may float tables to a column’s top or bottom, and set wide tables across both columns, but place two-column tables at the top or bottom of the page.

## 2.9. Citations and References

Please use APA reference format regardless of your formatter or word processor. If you rely on the  $\LaTeX$  bibliographic facility, use `natbib.sty` and `icml2016.bst` included in the style-file package to obtain this format.

440 Citations within the text should include the authors' last  
 441 names and year. If the authors' names are included in  
 442 the sentence, place only the year in parentheses, for exam-  
 443 ple when referencing Arthur Samuel's pioneering work (?).  
 444 Otherwise place the entire reference in parentheses with the  
 445 authors and year separated by a comma (?). List multiple  
 446 references separated by semicolons (???). Use the 'et al.'  
 447 construct only for citations with three or more authors or  
 448 after listing all authors to a publication in an earlier refer-  
 449 ence (?).

450 Authors should cite their own work in the third person in  
 451 the initial version of their paper submitted for blind review.  
 452 Please refer to Section 2.3 for detailed instructions on how  
 453 to cite your own papers.  
 454

455 Use an unnumbered first-level section heading for the refer-  
 456 ences, and use a hanging indent style, with the first line  
 457 of the reference flush against the left margin and subse-  
 458 quent lines indented by 10 points. The references at the  
 459 end of this document give examples for journal articles (?),  
 460 conference publications (?), book chapters (?), books (?),  
 461 edited volumes (?), technical reports (?), and dissertations  
 462 (?).

463 Alphabetize references by the surnames of the first authors,  
 464 with single author entries preceding multiple author entries.  
 465 Order references for the same authors by year of publica-  
 466 tion, with the earliest first. Make sure that each reference  
 467 includes all relevant information (e.g., page numbers).  
 468

## 469 2.10. Software and Data

471 We strongly encourage the publication of software and data  
 472 with the camera-ready version of the paper whenever ap-  
 473 propriate. This can be done by including a URL in the  
 474 camera-ready copy. However, do not include URLs that  
 475 reveal your institution or identity in your submission for  
 476 review. Instead, provide an anonymous URL or upload  
 477 the material as "Supplementary Material" into the CMT re-  
 478 viewing system. Note that reviewers are not required to  
 479 look at this material when writing their review.  
 480

## 481 Acknowledgements

483 **Do not** include acknowledgements in the initial version of  
 484 the paper submitted for blind review.

485 If a paper is accepted, the final camera-ready version can  
 486 (and probably should) include acknowledgements. In this  
 487 case, please place such acknowledgements in an unnum-  
 488 bered section at the end of the paper. Typically, this will  
 489 include thanks to reviewers who gave useful comments,  
 490 to colleagues who contributed to the ideas, and to fund-  
 491 ing agencies and corporate sponsors that provided financial  
 492 support.
